

Eco Club - SDG Goal 6 Clean Water & Sanitation

Date: 22nd September 2020

Grades: 1

Comprehensive water education provides the necessary tools to monitor water quality in order to reduce contamination, helps to improve water use by developing greater resources for its reuse and contributes to raising awareness among communities to ensure they play an active part in improving their water management and sanitation.

As a part of our Eco Club activity, students of Grade 1 were sensitized about the importance of water and the ways in which this most important natural resource can be saved and conserved.

Students learnt about nations that are battling water scarcity through stories and videos presented in the class. Furthermore, the little water saviors expressed their concerns and pledged to work towards the goal of water conservation by making beautiful badges with an impactful caption '**I AM THE CHANGE MAKER**'.
